LibreCAD Documentation

All the help files and support documentation are only available on the web.

How the documentation is organized ?

The User Manual is hosted at *Read the Docs* whereas the tutorials and how-to are available in this *DokuWiki*. Together these supercede the old wiki.

LibreCAD User Manual

The LibreCAD User Manual contains:

- **Installation** instructions including *building from source* and configuration of LibreCAD.
- **Reference** section describing the commands and their parameters.
- **User guides** providing steps to perform common tasks.

It is the primary source of documentation.

Other User Manuals

Other manual:

- http://www.heikell.fi/downloads/LibCAD_220rc1.pdf

Note that these manuals may be for older versions of LibreCAD and may not reflect the command or layout found in the latest release of LibreCAD.

You may find older documentation for version 1.0 and 2.0, and some French and Spanish documents, in the old wiki.
