

This section is under work

LibreCAD Documentation

Documentation is only available on the web. It consists of the website and blog, Github and SourceForge repositories, User Manual, Wiki, Forum, Zulip chat Forum and IRC #librecad.

How the documentation is organized ?

The [User Manual](#) and this *DokuWiki* containing [tutorials](#) and [how-to](#) supercede the [old wiki](#).

LibreCAD User Manual

The [LibreCAD User Manual](#) hosted at *Read the Docs* contains:

- **Installation** instructions including *building from source* and configuration of LibreCAD.
- **Reference** section describing the commands and their parameters.
- **User guides** providing steps to perform common tasks.

It is the primary source of documentation.

Other User Manuals

Other manual:

- http://www.heikell.fi/downloads/LibCAD_220rc1.pdf

Note that these manuals may be for older versions of LibreCAD and may not reflect the command or layout found in the latest release of LibreCAD.

You may find older documentation for version 1.0 and 2.0, and some French and Spanish documents, in the [old wiki](#).
