Documentation

The documentation is only available on the web. It consists of the Website and Blog, Github and SourceForge repositories, User Manual, old Wiki, Forum, Zulip chat Forum and IRC #librecad.

LibreCAD User Manual

The LibreCAD User Manual is the primary source of user documentation and, combined with this wiki's tutorials and how-to, supercedes the old wiki.

The manual is hosted at *Read the Docs* and contains:

- **Installation** instructions including *building from source* and configuration of LibreCAD.
- **Reference** section describing the commands and their parameters.
- **User guides** providing steps to perform common tasks.

Other User Manuals

Other manual:

- http://www.heikell.fi/downloads/LibCAD_220rc1.pdf

Note that these manuals may be for older versions of LibreCAD and may not reflect the command or layout found in the latest release of LibreCAD.

You may find older documentation for version 1.0 and 2.0, and some French and Spanish documents, in the old wiki.
